

AMENDED CONSENT DECREE SEMI-ANNUAL REPORT #12

JANUARY 1, 2025 – JUNE 30, 2025

August 31, 2025

Sanitation District No. 1

1045 Eaton Drive
Ft. Wright, KY 41017

TABLE OF CONTENTS

SECTION 1. INTRODUCTION	1
SECTION 2. OVERFLOW DETAILS.....	1
2.1 Dry Weather CSOs.....	3
2.2 SSOs Caused by Operational Failures	4
2.3 SSOs at Pump Stations Caused by Wet Weather	10
2.4 Model Predicted SSOs	11

ACRONYMS AND ABBREVIATIONS

ACD	Amended Consent Decree
District	Sanitation District No. 1
Hrs	Hours
MG	Million Gallons
MH	Manhole
Min	Minutes
PS	Pump Station
SD1	Sanitation District No. 1
UT	Unnamed Tributary
TY	Typical Year

SECTION 1. INTRODUCTION

The Semi-Annual Report is submitted to fulfill the reporting requirements of Sanitation District No. 1's (SD1) Amended Consent Decree (ACD), as entered on May 22, 2019. The ACD is a legal agreement with the U.S. Environmental Protection Agency and the Kentucky Energy and Environment Cabinet. The purpose of the ACD is to address sanitary sewer overflows in SD1's sanitary sewer system and combined sewer overflows in the combined sewer system to improve water quality throughout SD1's service area. Specifically, Section V Reporting Requirements states:

47. Semi-Annual Reports. The District shall submit to the Cabinet/EPA a Semi-Annual Report no later than sixty days after the end of each six-month calendar period ending June 30 and December 31.

Information contained within this report describes SD1's compliance with ACD Case No. 2:05-CV-199 (WOB) for the first 6 months of 2025.

SECTION 2. OVERFLOW DETAILS

Paragraph 47 of the ACD provides the details to be included in the report:

47. The Semi-Annual Report shall include the date, time, location, estimated volume, estimated duration, receiving water (if any), cause and actions taken to respond to and repair or otherwise resolve the cause of all SSOs and dry weather CSOs occurring in the most recently completed six-month calendar period. For reported SSOs, the Semi-Annual Report shall also identify any project that may be included in Appendix C of the Amended Consent Decree or in an Updated Watershed Plan that is designed to eliminate that SSO. The Semi-Annual Report shall also include such information in a tabulated electronic format.

The Semi-Annual Report provides overflow details from multiple sources. The two categories of Dry Weather CSOs and SSOs Caused by Operational Failures are derived from records that were a result of visual confirmations of the overflows. The category of SSOs at Pumps Stations is derived from records that were a result of telemetry-based alarms of remotely sensed overflows. The category of Model-Predicted Wet Weather SSOs is derived from hydraulic models that are continuously updated and calibrated with a robust flow monitoring program, and simulations of wet weather events that are

recorded by SD1's network of 22 rain gauges. All documented SSO events detailed in this report exceed 1000 gallons. The mean frequency distribution storm periods and recurrence intervals detailed in Sections 2.3 and 2.4 are derived from Rainfall Frequency Atlas of the Midwest - Bulletin 71.

2.1 Dry Weather CSOs

CSO	KPDES Outfall #	Date & Time	Location y, x)	Estimated Volume (gallons)	Duration (hrs:min)	Receiving Water	Cause	Actions
0790015	031	2/2/2025 1000	-84.500 39.094 Degrees	78,280,000	485:00	Ohio River	Equipment Malfunction – Mechanical Failure	Mechanical failure with pump station resulted in a flood and pump station shutdown. This led to discharge at the upstream CSO location.

2.2 SSOs Caused by Operational Failures

SSO	Date & Time	Location (y, x)	Estimated Volume (gallons)	Duration (hrs:min)	Receiving Water	Cause	Actions
2391746	1/12/2025 1315	-84.734 39.027 Degrees	2,280	1:00	Ohio River	Force Main Failure – Line Break	Only released when pumps were running. Minimal impact. Area was excavated at time of repair. Seed and straw applied.
1110286	1/21/2025 1045	-84.598 39.011 Degrees	3,990	1:45	Rice Creek	Blockage - Debris	Manhole was found releasing. Line was jetted open, and area cleaned of debris. Main line and surrounding line were CCTV inspected and found to be in good condition.
1750018	1/25/2025 1115	-84.594 38.951 Degrees	1,710	0:45	UT Banklick Creek	Blockage – Outside Contractor	Guy wire from new electric pole pierced SD1 sewer line. Line was repaired by SD1 on 1/23/2025. Area was raked and debris removed. Seed and Straw applied.

SSO	Date & Time	Location (y, x)	Estimated Volume (gallons)	Duration (hrs:min)	Receiving Water	Cause	Actions
1550060	1/23/2025 0945	-84.557 39.046 Degrees	2,204	0:58	UT Pleasant Run Creek	Blockage – Roots	Surcharge evidence upon arrival. During jetting, manhole began releasing minimal amount. Line opened. Main and surrounding lines were CCTV inspected and determined to be in good condition. Area was raked and flushed. All debris removed. Seed and straw applied.
2410519	2/7/2025 1745	-84.687 39.016 Degrees	5,890	2:35	Gunpowder Creek	Blockage - Debris	Manhole found releasing. Line was jetted and flow returned. Debris and rags were determined to be the cause. One line CCTV inspected, and one acoustically inspected, and all were in good condition. Area was raked and debris removed. Hillside was flushed. No pumping was performed due to high creek level. Seed and straw applied.
0350003	2/7/2025 1815	-84.443 39.103 Degrees	17,000	15:10	UT Ohio River	Blockage – Roots	Manhole found releasing. Roots were cut from the line and flow restored. Line upstream was CCTV inspected, line downstream was acoustically inspected, and all were in good condition. Area was raked and flushed. Dammed area was pumped back into the system.
2350813	2/14/2025 1830	-84.490 38.941 Degrees	1,800	2:00	DeCoursey Creek	Force Main Failure – Line Break	Force main break. Only release was during active pumping. Pump station was shut down. Minimal release. Area was pumped and excavated at time of repairs.

SSO	Date & Time	Location (y, x)	Estimated Volume (gallons)	Duration (hrs:min)	Receiving Water	Cause	Actions
2300734	3/4/2025 1300	-84.578 38.943 Degrees	2,280	1:00	Banklick Creek	Blockage – Debris	Manhole was jetted and flow restored to line. Debris was found to be cause. One line CCTV inspected, and two acoustically inspected and all were in good condition. Area was flushed and raked with all debris removed.
2310033	3/4/2025 1731	-84.549 38.947 Degrees	3,040	1:20	UT Brushy Creek	Blockage – Roots	Releasing manhole was jetted and roots found to be the cause. One line CCTV inspected, and one acoustically inspected, and all were in good condition. Area was flushed and raked with all debris removed.
2300271	3/10/2025 1828	-84.542 38.977 Degrees	5,776	2:32	Banklick Creek	Blockage – Roots	Releasing manhole was jetted and roots were found to be the cause. One line CCTV inspected, and two acoustically inspected and all were in good condition. Area was flushed and raked with all debris removed. Seed and straw applied.
2320469	4/4/2025 2015	-84.652 38.916 Degrees	3,610	1:35	Mud Lick Creek	Blockage – Debris	Releasing manhole was jetted open and debris was found to be the cause. One line CCTV inspected, and two acoustically inspected and all were in good condition. Area was flushed and raked with all debris removed. Seed and straw applied to affected area.

SSO	Date & Time	Location (y, x)	Estimated Volume (gallons)	Duration (hrs:min)	Receiving Water	Cause	Actions
0140142	4/4/2025 0915	-84.463 39.024 Degrees	3,420	1:30	UT Pooles Creek	Blockage – Roots	Releasing manhole was jettted open and debris was found to be the cause. One line CCTV inspected, and two acoustically inspected and all were in good condition. Area was flushed, raked and debris hauled away. Channel debris could not be recovered due to high storm water flow.
2030376	4/9/2025 1410	-84.550 39.002 Degrees	1,200	1:20	UT Bullock Pen Creek	Condition of Pipe – Landslide	Landslide caused pipe to separate at manhole. Swale flushed area before any pumping could take place. High storm water flow due to recent heavy rain. All solids were raked and removed.
2010042	4/10/2025 1900	-84.499 39.011 Degrees	2,280	1:00	UT Holds Branch	Blockage - Vandalism	Line was jettted open and vandalism (large sticks and rocks) were found to be the cause. Area from the release was raked and hauled away. Contained area was flushed and pumped back into the system.
2030113	4/1/2025 1231	-84.550 39.000 Degrees	3,952	1:44	UT Bullock Pen Creek	Blockage – Roots	Releasing line was jettted and cleared of roots. One line CCTV inspected, and two acoustically inspected and all were in good condition. High storm water flow due to recent heavy rain. Area could not be flushed or pumped. All solids were raked and removed. Seed and straw were applied.

SSO	Date & Time	Location (y, x)	Estimated Volume (gallons)	Duration (hrs:min)	Receiving Water	Cause	Actions
1920011	4/29/2025 1405	-84.550 39.000 Degrees	54,430	23:55	UT Duck Creek	Blockage – Roots	Manhole was found releasing; crew was called in to jet the line open. The blockage could not be broken. Crew worked on the line for 5 hours until it became unsafe. The crew returned the following morning and attempted to get the line open but crew was again unsuccessful. Line was CCTV inspected and heavy roots were found. The decision was made to have the line dug up and repaired. Line was repaired and area from release was excavated and re-graded. Seed and straw were applied. Line was again CCTV inspected and determined to be in good condition. Roots were also removed from m/h 1920008 and 1920007. All lines are now open and flowing as they should. Area was flushed and debris removed with vector.
2400490	5/3/2025 1130	-84.746 39.101 Degrees	3,450	1:30	UT Phillips Creek	Equipment Malfunction – Mechanical Failure	Mechanical failure on air release valve during wet weather event.
2230046	5/20/2025 1000	-84.368 38.975 Degrees	9,120	4:00	UT Fourmile Creek	Blockage – Roots	Roots in manhole were found to be the cause of the release. The area is under a landslide. The mainline is being bypassed with a temporary line until a permanent fix is engineered. Line was jetted and flow returned to the pipe. Manhole cleared of all roots and flow returned to normal. Preventative maintenance schedule updated. Storm water flow was too heavy to recover any debris. Area around manhole was raked and seed and straw were applied.

SSO	Date & Time	Location (y, x)	Estimated Volume (gallons)	Duration (hrs:min)	Receiving Water	Cause	Actions
2280219	6/12/2025 1150	-84.631 38.939 Degrees	8,360	3:40	UT Soth Fork Gunpowder Creek	Blockage – Roots	Line was jetted and debris removed. Debris collected in a line sag was determined to be the cause. One line CCTV inspected, and two acoustically inspected and all were in good condition. Debris around the area was raked and removed. Heavy rain removed most of the debris. The remaining debris was hauled away. Seed and straw were applied to the affected area.
0060015	6/13/2025 1400	-84.441 39.048 Degrees	4,110	66:40	UT Threemile Creek	Condition of Pipe – Collapsed Pipe	During routine inspection, a line was found seeping into the channel several feet upstream of Manhole 0060014. A crew was dispatched and attempted to jet the line open; however, the effort was unsuccessful. Jetting revealed the presence of heavy mud and roots, and further investigation determined that the pipe had a large hole in the bottom and was collapsed. Construction was notified to assess the situation. Due to very heavy rainfall at the time and the steep terrain in the area, it was deemed unsafe to mobilize heavy equipment immediately. As a result, the decision was made to delay repairs until conditions were safe. Once the weather and site conditions improved, the line was excavated and repaired. The excavation confirmed the cause of failure to be heavy root intrusion and a broken pipe. The line had been seeping directly into the channel, but due to the significant rainfall, environmental impact was minimal. Line was excavated and repaired. Heavy rain flushed channel prior to cleanup.
2020735	6/18/2025 0755	-84.525 38.988 Degrees	3,040	1:20	UT Banklick Creek	Blockage – Roots	Releasing line was jetted and heavy roots were determined to be the cause. An entry was required, and all roots were removed from the manhole, as well as, several feet down the main line. Area was flushed with water as well as a large amount of rain. Affected area was raked and seed and straw applied.

2.3 SSOs at Pump Stations Caused by Wet Weather

SSO	Date & Time	Storm Event Duration (hrs)	Total Rainfall (in)	Storm Recurrence Interval	Spill Volume (gallons)	Spill Duration (hrs:min)	1 Week Antecedent Rainfall (in)	Antecedent Season (Dormant - Nov - Mar; Growing - April - Oct)	Location (y, x)	Receiving Water	OF with 2040 Improvements	Related Project

***Description of Event:**

On April 6, 2025, the Ohio River reached a flood elevation of approximately 61 feet. At this elevation, Silver Grove Pump Station operations shifted to a reduced pumping configuration, with only one pump remaining in service. This event therefore represents an operational occurrence outside the scope of TY parameters.
